

Project Design Phase-I Solution Architecture

Date	02 November 2022
Team ID	PNT2022TMID28666
Project Name	Project - A Novel Method For Handwritten Digit Recognition System.
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

Find the best tech solution to solve existing business problems.

- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
- It written as understandable language to user interface from different images or characters
- Managed services, cloud service, and most important is technology strategy

Example - Solution Architecture Diagram:
